

Healing with negatively charged water

It is common knowledge now, that water is critical to body function and health. It represents 70% or more of the body. The science of water is relatively new and largely incomplete, however there is enough science to demonstrate that water that possesses **a negative millivolts charge is life-affirming or sustains life.**

Human and animal cells have a healthy charge of between -20mV to -50mV. The cells of an injured part of the body will rise to a negative (-) 50mV in order to accelerate healing and make new cells. This change facilitates the movement of nutrients to the area that requires healing.

Therefore, we can assume that in order to heal, the body requires negatively charged cells and nutrient availability to deliver a negative charge (-) 50mV on demand.

Cell Charge and Human Health

Healthy children and adults have a cell charge in the order of -25 to -35. Once cell charge falls to -15 and below then tiredness, sickness, infection and chronic disease arises. A healthy cell charge can be sustained through natural processes, such as;

- early morning sunlight
- nutrient dense food
- A high % of beneficial microbes in the gut
- drinking unpolluted water - water from a pristine source and with no added chemicals such as fluoride and chlorine
- walking barefooted on the beach or on grass
- and immersing the body in moving water - e.g. ocean, river, rain, shower

A healthy cell charge can convert to an unhealthy, low negative or positive charge by;

- exposure to air pollution (most large urban environments)
- consumption of highly processed, nutrient void junk food
- chemically contaminated water and reverse osmosis water (RO) - acid or dead water
- moderate to heavy consumption of carbonated drinks, alcohol and caffeine
- over-cooked and processed food
- moving air from air conditioners, fans, hair dryers, etc.

Negative, healthy charge from a cell will always move to the cells of unhealthy, lowest negative or a positive charge. For example, healthy people transfer healthy negative energy to unhealthy people through hugging or touching, and lovers or couples can get into cell-energy equilibrium from energy transfer (one person to the other) through physical contact, eg. holding hands, hugging, etc. This is why certain professions involved in close physical contact with clients (eg. physiotherapists, osteopaths, massage therapists, etc.) are always at risk of losing negative charge from their body to their clients. Animals regularly give healthy negative charge to

people, then go outside to recharge. Any contact with nature, eg, trees, rocks, natural waters, etc. will enable negative charge from the earth to transfer to cells in the body and positive charge from the body to transfer to the earth. This is why such contact with nature feels so good for your wellbeing. This process is called grounding.

The increase in sickness and disease since about the 1950's is directly related to the loss of negative cell charge from the cells of people and animals. This has been largely caused by contamination of air, soil, water and food through chemicals that have caused cell toxicity. Also, people have a much higher propensity to take pharmaceutical drugs rather than use natural healing approaches.

How can you tell if you are at risk of low cell charge?

A simple test is to measure the pH (potential hydrogen) of your urine (cell water) and it should be between 6.5 and 7.8. It is advisable to get a good quality digital pH meter for this task. If the measurement is below 6.5 then your healing capacity has been limited and action needs to be taken to raise urine pH well above 6.5.

An acidic urine PH (i.e., below 6.5) can be indicative of acid blood. This situation can be corrected with a complex salt (e.g., Celtic salt or Himalayan Salt) and an adequate intake of green leafy vegetables that are high in alkaline minerals.

There is ample scientific evidence to show that cancer will occur with prolonged cell water charge below -15mV and primarily within the + mv range. However, while aging is inevitable, the **process of aging and disease are vastly hastened by adverse (entropy) forces that include a multitude of environmental, lifestyle and diet factors**. That is to say, there is no single factor (eg. genes) in aging and the onset of disease.

Negatively Charged "Structured" Water

Most natural and wild flowing waters have a negative charge (millivolts-mV). These waters are found in some mineralised groundwater sources, springs and unpolluted rivers. The world's **healing water** sources (sometimes called miraculous, magic or energised water) are often discovered in wells, bores and springs where the water is in close contact with the minerals and magnetism of the rocks. These waters are known for their homeopathic and healing effects for animals and humans. The negative cell charge in the cells of these water sources, are what makes them healing to the human body.

Since about 2000 I have researched and worked with a number of people involved with subtle energies for measuring the health of living systems (eg, soil, plants, water, air, animals and humans) and this has led to trials with the use of **negatively charged** water on soil, plants, water, animals and humans.

In 2012, my research company developed a magnetic device to transform water to hold a negative charge. The quality of the input water is critical to achieving high negative charge potential. Early test results showed that when this negatively charged water is used on living systems they are capable of achieving full life potential, given adequate nutrients and other essential processes that may be appropriate for the system (eg. water needs to move or vortex to maintain charge). I have observed vegetables grow to 2-3 times normal weight and increase nutrient uptake by 2-4 fold. Disease and insect attack were reduced significantly. Animals and young children seem to be sub-consciously attracted to drink this water (water magnetised/energised for a groundwater source, and what I call energised water).

People involved in trialling this energised water have reported to me that their fogginess has lifted and they feel more vital and creative. There is further independent evidence of these effects at <http://www.greenmagnetfoundation.org/node> or simply Google magnetised and/or energised water.

The Body is self regulating given the right cell charge

Your body is a self regulating and self healing system and you must have electrons available to sustain your cell life, otherwise the cells will die and your organs and other life support systems (eg. liver, heart, immune, etc.) will malfunction. Without the ability to achieve cell charge of -50mV at the point of healing you cannot achieve healing. This low cell charge (negative) means that injuries or infections will not repair properly and you could develop chronic diseases. The remedy is not in the use of pharmaceutical drugs that in the main decrease cell charge, but in a diet with nutrient dense food and drinking negatively-charged water. That is, you need **voltage food, water and environment**. Also, the build up of toxins in the body is a major cause of the loss of negative charge in cells. Your body will naturally detox with a healthy cell charge, otherwise you may need to use a natural detox procedure. *(For natural detox procedures and supplements, contact orders@phion.com.au)*

In Closing

Scientific papers since about 2000, demonstrate that **water and biological coherence is fundamental to our energy systems and to optimise health, vitality and longevity**. The science of water structure provides insight to the liquid crystalline molecular fabric that interconnects all parts and processes within living things. This living matrix gives a substantial basis for the term *holistic* and a scientific basis for all of the alternative therapies for humans and animals, including **homeopathic approaches using energised water**.

Water structure and energy (including cell polarity) are more critical to life function than the natural chemical constituents of water. The living world is an in equal partnership between the biological molecules and water.

Your body, like everything else in the universe is electric.

ELEMENTS OF LIFE

Phi'on products are designed to address the fundamental link between healthy soils, plants, water, animals and humans.

Phi'on takes into account the essential links to life on earth: biology, trace minerals, light, water, associated subtle energy systems and the geometry of life. All products are made in awareness of life energy flows, boundaries, order and intent.

Phi'on – Elements of Life products have been developed and researched since 2003. This research is designed to produce nutrient dense products and structured (negative charge) water that supports the human body's natural capacity to regulate and heal. The Phi'on philosophy is that quality (nutrient dense) food and water are the pathway to a healthy life. At Phi'on we aim to inform our clients on how to live a healthier, more robust and longer life without disease and extensive health costs.

Information about Phi'on and our product range for Humans, Animals, Soils, Plants, Water, Air and Surfaces is at www.phion.com.au
